

Component node is available in subflow

Outline

- **Purpose**

User could add the component node in the subflow.

- **Equipment**

TM5

- **Function operation**

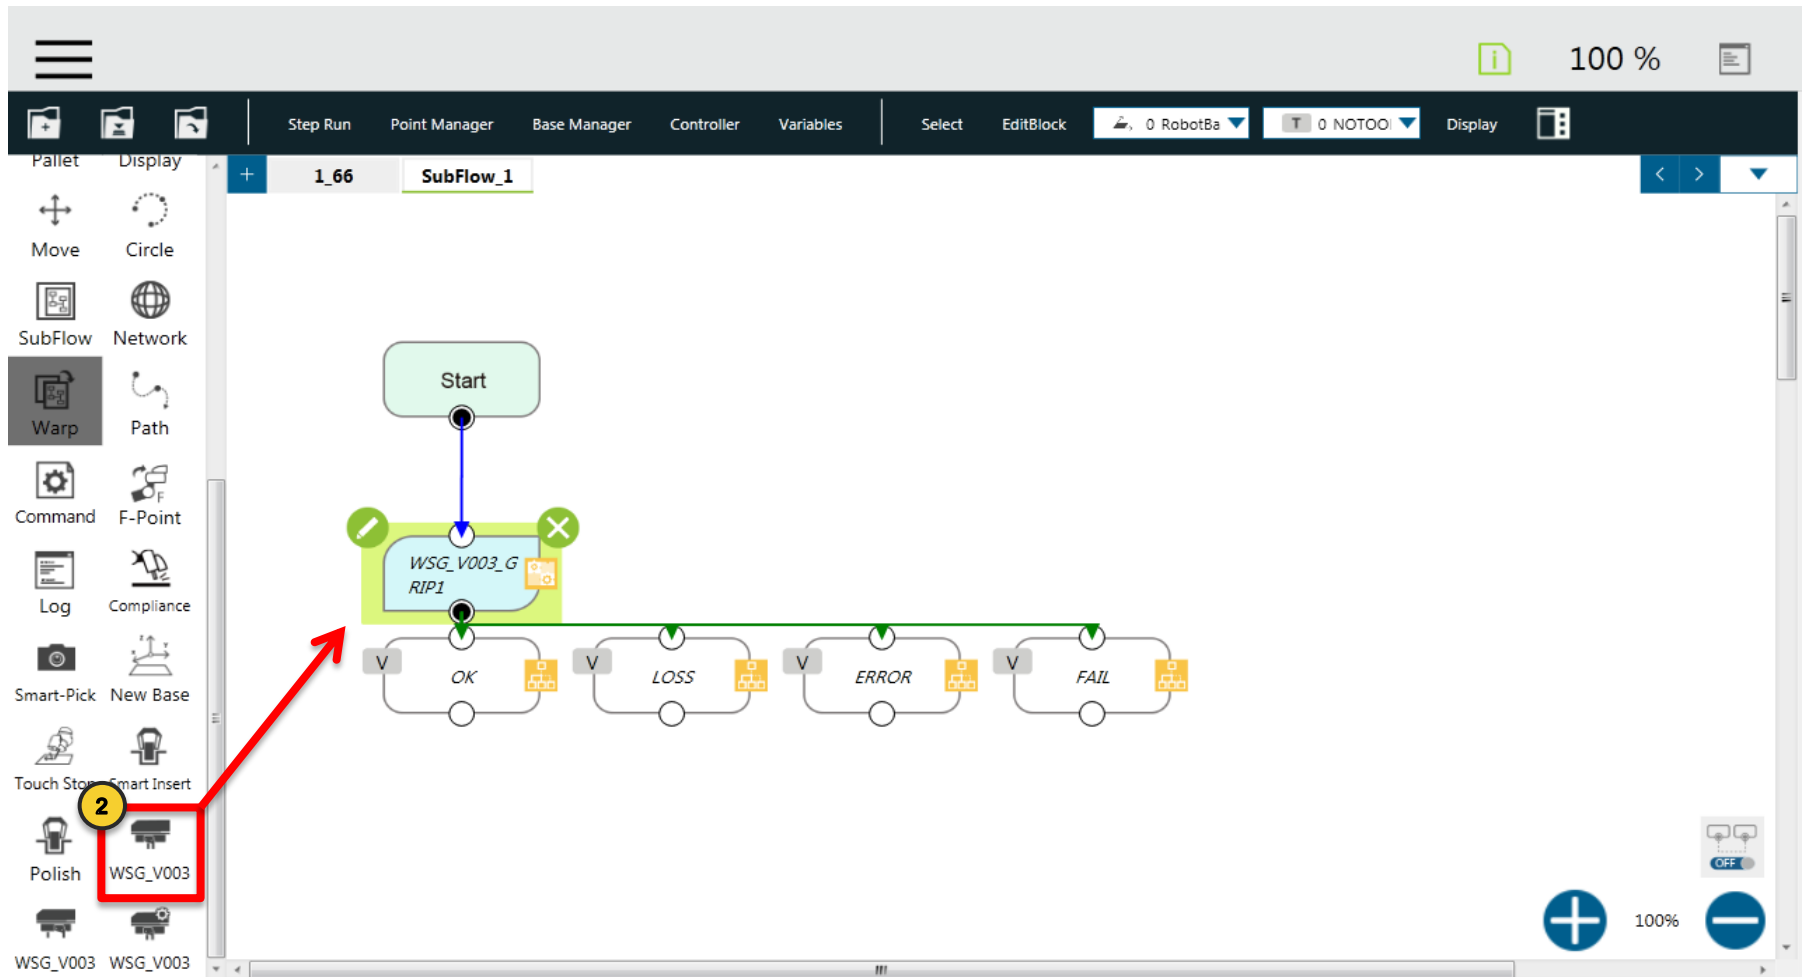

Function operation(1/2)

➤ Add a new project → add a subflow

The screenshot displays a software interface for creating a subflow. The top menu bar includes options like Step Run, Point Manager, Base Manager, Controller, Variables, Select, EditBlock, and Display. The main workspace shows a diagram with a 'Start' block connected to a 'SubFlow_1' block. A red box highlights the 'SubFlow_1' block, and a yellow circle with the number '2' is next to it. On the left sidebar, the 'SubFlow' icon is highlighted with a red box and a yellow circle with the number '1'. The bottom right corner shows a zoom control set to 100%.

Function operation(2/2)

- Component node is available in the subflow, and user can edit it.
